

A YEAR OF CHANGE

The Gore Creek you see today won't stay this way long. The creek responds to the seasons—temperatures rise and fall, water levels surge and retreat.

Whitewater kayakers and rafters enjoy the challenge of deep, swift waters in May and June. By fall, water levels drop, and the creek is warm and calm enough to hop across. Waders and anglers prefer the waters of late summer.

60% of the water that flows through Gore Creek all year passes through in just 6 weeks.
