

Examples of Completed Public Use Projects

#4 - Eagle County School District

Excerpt for 1994 Open Lands Plan:

The only Eagle County School facility in the Town of Vail is the Red Sandstone School. The District envisions utilizing this facility for the foreseeable future. They would like more play areas near the school but realize that the topography is very constraining.

#6 - Vail Housing Authority/Community Development Department
Excerpt from the 1994 Open Lands Plan:

The Vail Housing Authority is interested in "employee" housing projects on the **Mountain Bell Site** and at Vail Commons. The Housing Authority believes that any higher density project, if located within the Town, should be in close proximity to either the core area or the West Vail commercial area or have good transportation access.

#6 - Vail Housing Authority/Community Development Department

Excerpt from the 1994 Open Lands Plan:

The Vail Housing Authority is interested in "employee" housing projects on the Mountain Bell Site and at **Vail Commons**. The Housing Authority believes that any higher density project, if located within the Town, should be in close proximity to either the core area or the West Vail commercial area or have good transportation access.

#1 - Vail Public Works Department

Excerpt for 1994 Open Lands Plan:

The Public Works Department will need to expand their current facility located on the north side of Interstate 70. Currently, the Vail Associates' owned parcel of land immediately west of their existing facility is leased as a snow storage area and is the logical place for expansion. Additionally, a West Vail snow plow and cinder storage site has long been on their needs list.

#2 - Vail Fire Department

Excerpt for 1994 Open Lands Plan:

Over 10 years ago, the Vail Fire Department identified a need for a West Vail Fire Station. Response times from their main facility in the Village to West Vail are inadequate and continued growth has only exacerbated this problem. Because this is a health / safety issue, finding an acceptable site has received a high priority in the development of recommendations for the Public Facilities / Land Reserve portion of the Comprehensive Open Lands Plan.
